Dry box gloves are used to protect the operator from a hazardous product or in some cases to protect a sensitive product from contamination. They are available in a range of materials and hand sizes to suit different glove port diameters.

Materials:

Latex: Suitable for light pharmaceutical work.

Neoprene: For resistance to oil, grease and ozone. General industrial useage.

Butyl: Suitable for situations where gas impermeability is important.

Hypalon: For resistance to UV, ozone and concentrated acids.

Lead Loaded Hypalon: For protection against radiation.
